

GET vs POST Demo

The screenshot shows the Eclipse IDE with the file `index.html` open. The Project Explorer on the left shows a project named `GetPostDemo` with sub-projects `HelloWorld`, `Servers`, and `UserFormProject`. The Outline view on the right shows the document structure: `DOCTYPE html`, `html`, `head`, `body`, `h2: HTTP GET vs POST Demonstration`, `form action=MethodServlet`, `br`, `hr`, `br`, `h3: Using POST Method`, `input name=username`, `br`, `input name=age`, `br`, and `input type=submit`. The main editor displays the following HTML code:

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4 <meta charset="UTF-8">
5 <title>GET vs POST Demo</title>
6 </head>
7 <body>
8 <h2>HTTP GET vs POST Demonstration</h2>
9 <form action="MethodServlet" method="get">
10 <h3>Using GET Method</h3>
11 Name: <input type="text" name="username" required><br><br>
12 Age: <input type="number" name="age" required><br><br>
13 <input type="submit" value="Submit using GET">
14 </form>
15 <br><br>
16 <form action="MethodServlet" method="post">
17 <h3>Using POST Method</h3>
18 Name: <input type="text" name="username" required><br><br>
19 Age: <input type="number" name="age" required><br><br>
20 <input type="submit" value="Submit using POST">
21 </form>
22 </body>
23 </html>
```

The Servers view at the bottom shows `Tomcat v10.0 Server at localhost [Started, Synchronized]`. The status bar at the bottom indicates `Writable`, `Smart Insert`, and `23 : 8 : 669`.

The screenshot shows the Eclipse IDE with the file `MethodServlet.java` open. The Project Explorer on the left shows the same project structure. The Outline view on the right shows the document structure: `com.example`, `MethodServlet`, `doGet(HttpServletRequest, HttpServletResponse)`, and `doPost(HttpServletRequest, HttpServletResponse)`. The main editor displays the following Java code:

```
1 package com.example;
2
3 import java.io.IOException;
4 import java.io.PrintWriter;
5 import javax.servlet.ServletException;
6 import javax.servlet.annotation.WebServlet;
7 import javax.servlet.http.HttpServlet;
8 import javax.servlet.http.HttpServletRequest;
9 import javax.servlet.http.HttpServletResponse;
10
11 @WebServlet("/MethodServlet")
12 public class MethodServlet extends HttpServlet {
13
14     protected void doGet(HttpServletRequest request, HttpServletResponse response)
15         throws ServletException, IOException {
16
17         response.setContentType("text/html");
18         PrintWriter out = response.getWriter();
19
20         String name = request.getParameter("username");
21         String age = request.getParameter("age");
22
23         out.println("<html><body>");
24         out.println("<h2>GET Method Used</h2>");
25         out.println("<p><strong>Name:</strong> " + name + "</p>");
26         out.println("<p><strong>Age:</strong> " + age + "</p>");
27         out.println("<p><b>Data is visible in URL</b></p>");
28         out.println("</body></html>");
29     }
30
31     protected void doPost(HttpServletRequest request, HttpServletResponse response)
32         throws ServletException, IOException {
33
34     }
```

The Servers view at the bottom shows `Tomcat v10.0 Server at localhost [Started, Synchronized]`. The status bar at the bottom indicates `Writable`, `Smart Insert`, and `29 : 6 : 1062`.

HTTP GET vs POST Demonstration

Using GET Method

Name:

Age:

Using POST Method

Name:
